Role : Dot Net Developer, Front End Developer.

24 June 2023 To Till Date

Description:

The Enterprise Resource Planning (ERP) System is a comprehensive software solution designed to integrate and manage core business processes across an organization. The system centralizes data, streamlines operations, and improves decision-making by offering a unified platform for different business functions

This ERP system will consist of six key modules:

- **Finance Module:** Manages financial transactions, budgeting, and reporting Includes general ledger accounts payable & receivable, and tax management.
- **2. Distribution Module:** Manages supply chain, inventory, and logistics Optimizes order processing, warehouse management, and delivery tracking.
- **3. Manufacturing Module:** Handles production planning, scheduling, and execution Manages raw materials, work-in-progress (WIP) and finished goods.
- **4. Human Resource Management System (HRMS) Module:** Manages employee records, payroll, and attendance Handles recruitment, performance evaluation, and benefits administration
- **5. Customer Relationship Management System (CRMS) Module :** Manages customer data, interactions, and support services Enhances sales and marketing through lead tracking and campaign management.
- **6. Administration Module:** Controls user roles, permissions, and system security Manages system configurations and organization-wide settings Ensures data integrity, backups, and compliance with IT policies

Responsibilities:

- Designed and developed web applications using ASP.NET MVC, connecting to SQL Server for data management.
- Implemented CRUD operations using Entity Framework, Linq, ensuring seamless interaction with the database.
- Created dynamic and user-friendly front-end interfaces using **HTML, CSS, Bootstrap**, and JavaScript.
- Proficient in **LINQ**, console applications, and optimizing query performance through efficient data handling.
- Resolved UI bugs in raised in the ERP.
- Tested the ERP Application.
- Created JQuery Functions for client validation.
- Participated in the implementation of server-side functionality, Such as Controllers, View, Services and Entities.
