ACADEMIC PROJECTS

Title :Identifining Of Fake Profile Across Online Social Netwoks Using Neural Network Project

Description :-

- There is a tremendous increase in technologies these days.. Mobiles are becoming smart. Technology is associated with online social networks which has become a part in every one's life in making new friends and keeping friends , their interests are known easier.
- But this increase in networking online make many problems like faking their profiles, online impersonation having become more and more in present days.
- Users are fed with more unnecessary knowledge during surfing which are posted by fake users. Researches have observed that 20% to 40% profiles in online social networks like facebook are fake profiles.
- Thus this detection of fake profiles in online social networks results into solution using frameworks

Team size: 4
